

SHEETING HEADS

Upper part - Head arch

It can be covered in one of two ways.

- in one single piece called a "crescent", with covering made of rigid material
- using a simple polyethylene sheet.

Lower part - Option 1: Folding frames

In order to be able to access the structure with any means, frames have been manufactured with a tiltable opening system. They are made of **Ø 30 x 1.2 mm sendzimir Z275 galvanized tube**

Equipped with a service door which is 1.10 m wide, they have useful height up to the head arch.

The tilting system is safeguarded by 4 strong galvanized hinges. The fixing of the sheet is obtained by means of special metal clips. 2 support poles, for when the frames are lifted, complete the supply.

Lower part - Option 2: Rolled sheet

The sheet is wound on a \varnothing 30 mm tube up to the desired height. It is certainly the simplest, most economical and functional solution available.
